DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to a chimeric polypeptide comprising a PhoD secretion signal derived from *B. subtilis*, classified in class 530, subclass 350.
- II. Claims 1-2, drawn to a chimeric polypeptide comprising a LipA secretion signal derived from *B. subtilis*, classified in class 530, subclass 350.
- III. Claims 3-11, drawn to nucleic acids encoding a chimeric polypeptide comprising a PhoD secretion signal, cells comprising the same and use thereof to produce a desired protein, classified in class 435, subclasses 69.7, 320.1; class 536, subclass 23.1.
- IV. Claims 3-11, drawn to Claims 3-11, drawn to nucleic acids encoding a chimeric polypeptide comprising a LipA secretion signal, cells comprising the same and use thereof to produce a desired protein, classified in class 435, subclasses 69.7, 320.1; class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

Art Unit: 1636

different inventions have different functions, effects and modes of operation as the claims are drawn to functionally and structurally distinct polypeptides.

Inventions of Groups III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions, effects and modes of operation as the claims are drawn to nucleic acids encoding functionally and structurally distinct polypeptides.

Inventions of Groups III-IV and Groups I-II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the heterologous polypeptides of Groups I-II can be made synthetically.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for each groups is not coextensive (e.g. PhoD versus LipA proteins and secretion pathways), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1636

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
